

Main Toolbar

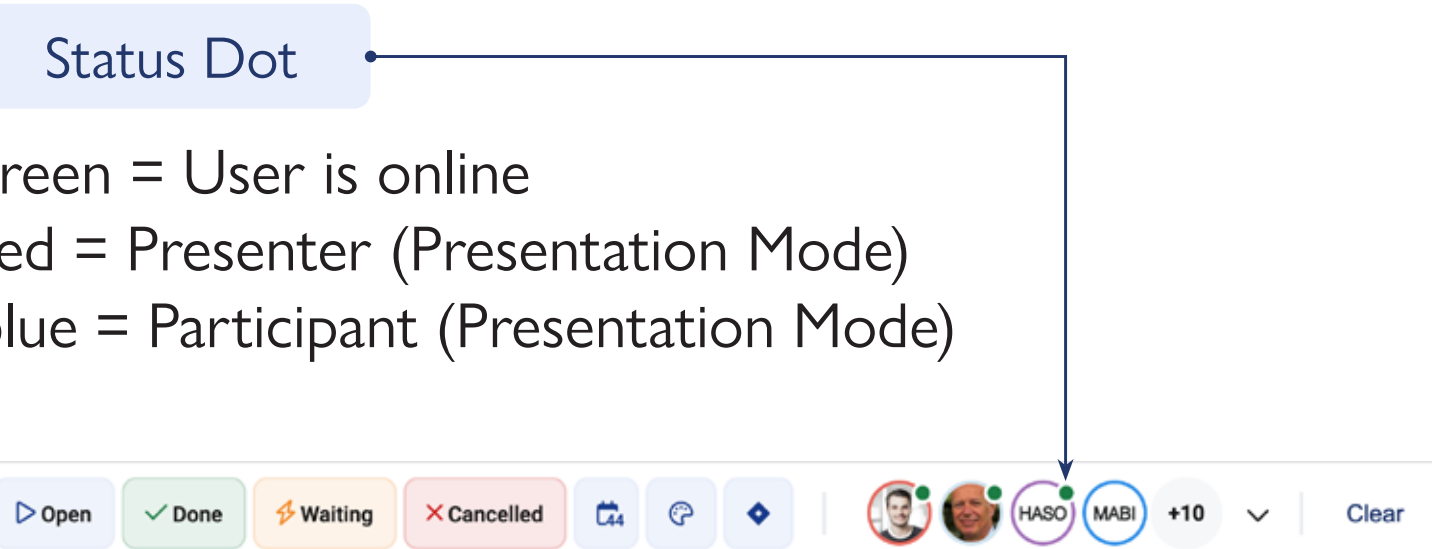

The main toolbar includes the most important features: IntelliSticks, Pen Tool and Templates.

IntelliSticky Toolbox: You can pre-define three sticky notes with specific colors and owners and set one as your favorite.

The **Template** section includes the IntelliFrame and Template Library, Template Upload and Template Editor.

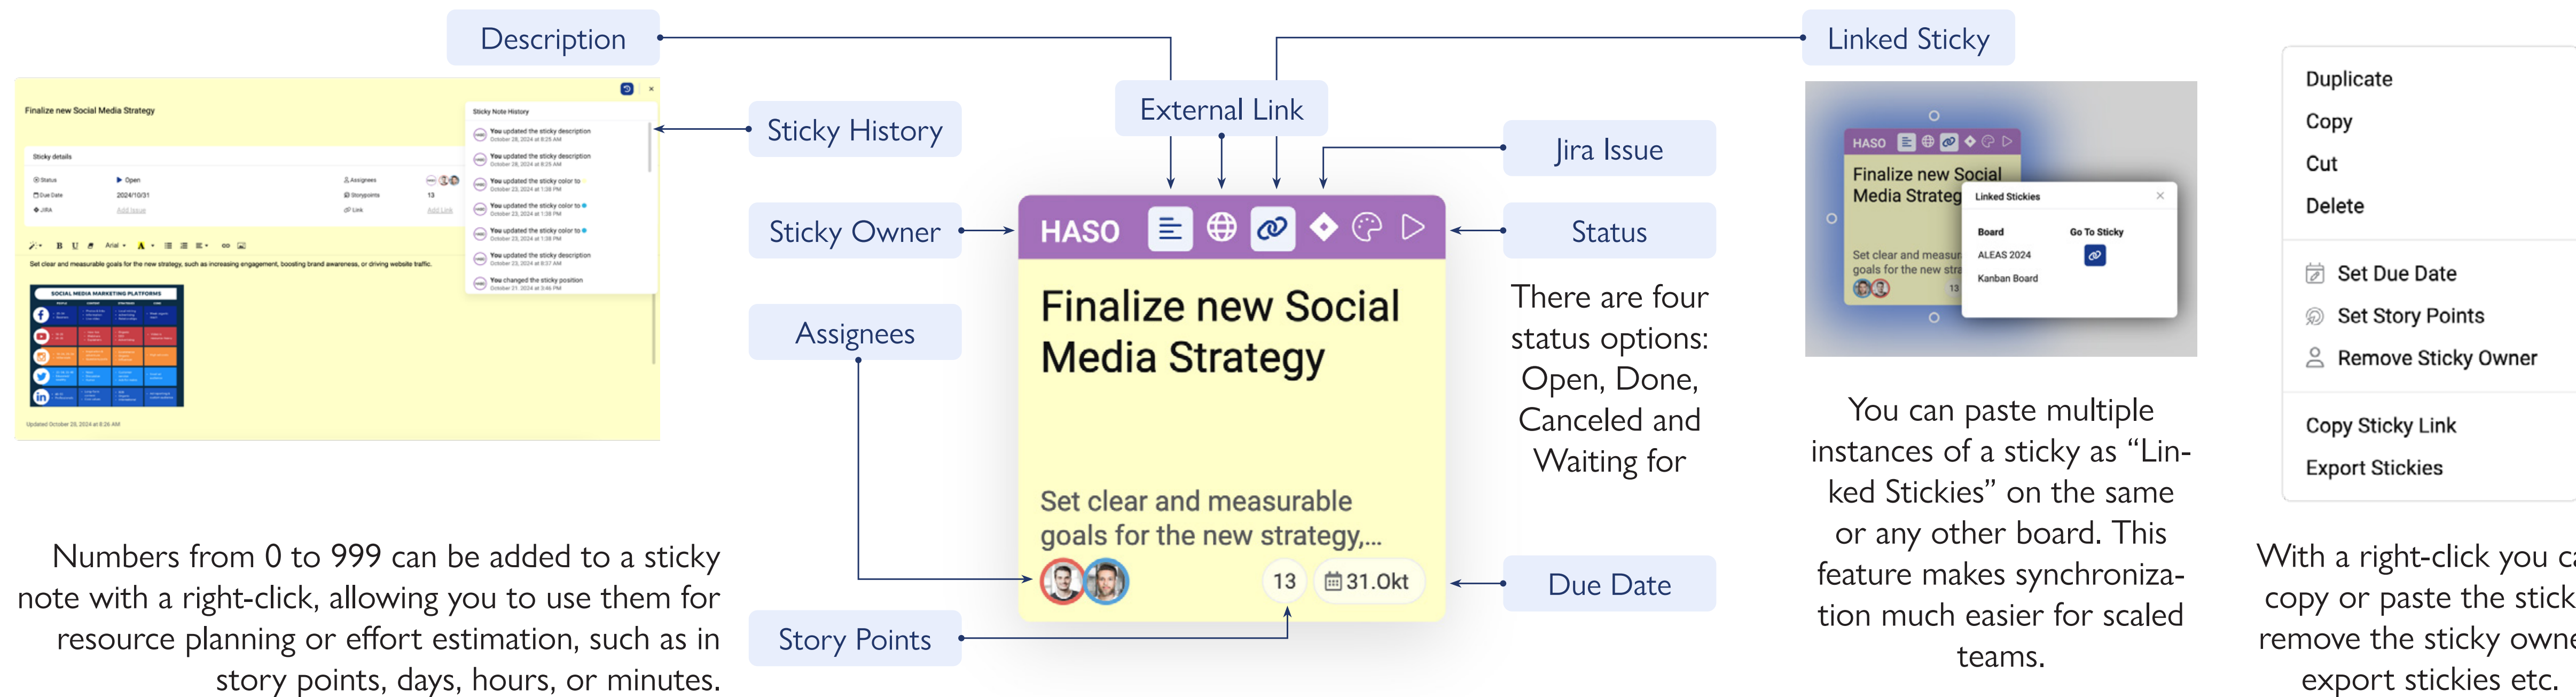

Filter Bar

In the Filter Bar at the top of the board you can filter stickies according to status, color, date, Jira issues and user. You can apply several filters at the same time.

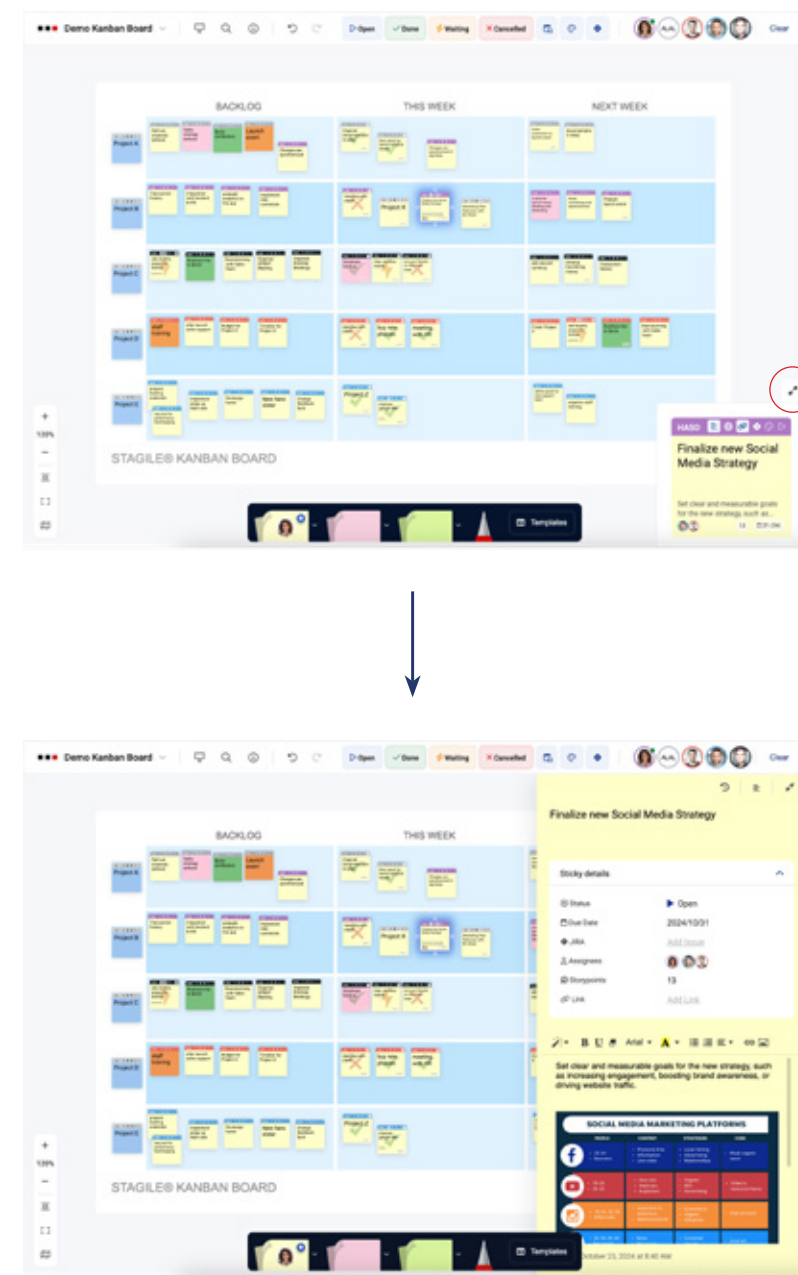

You can find the Text Search feature at the top left. Use the search function to find any IntelliSticky on the board that contains your keyword.

IntelliSticky

Numbers from 0 to 999 can be added to a sticky note with a right-click, allowing you to use them for resource planning or effort estimation, such as in story points, days, hours, or minutes.

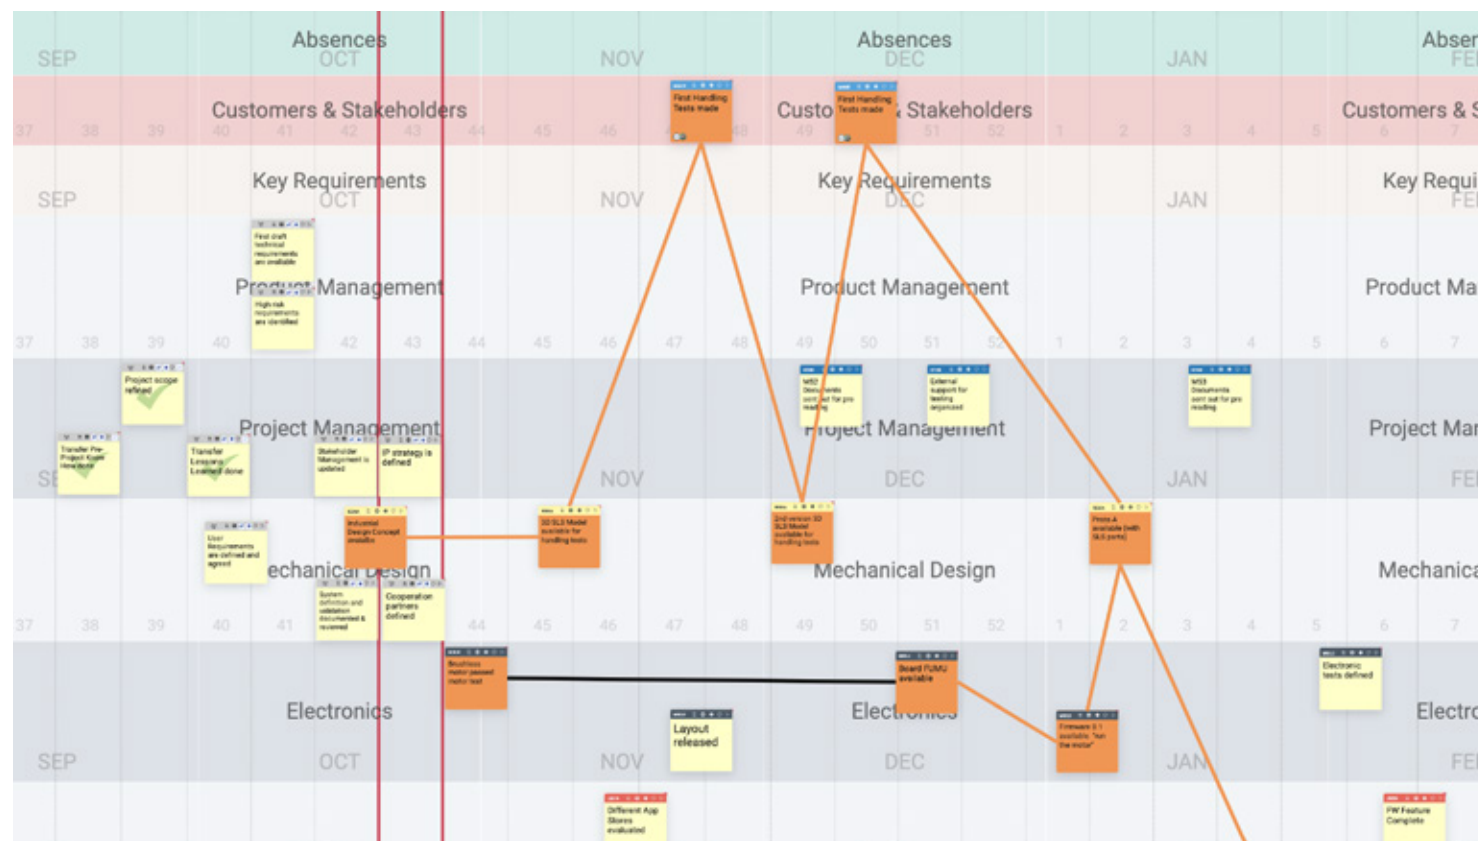

Lens

When hovering the cursor over a sticky, it will be magnified in the lens. Stickies can be edited in the Lens. You can add text, change the status, assign new users, etc.

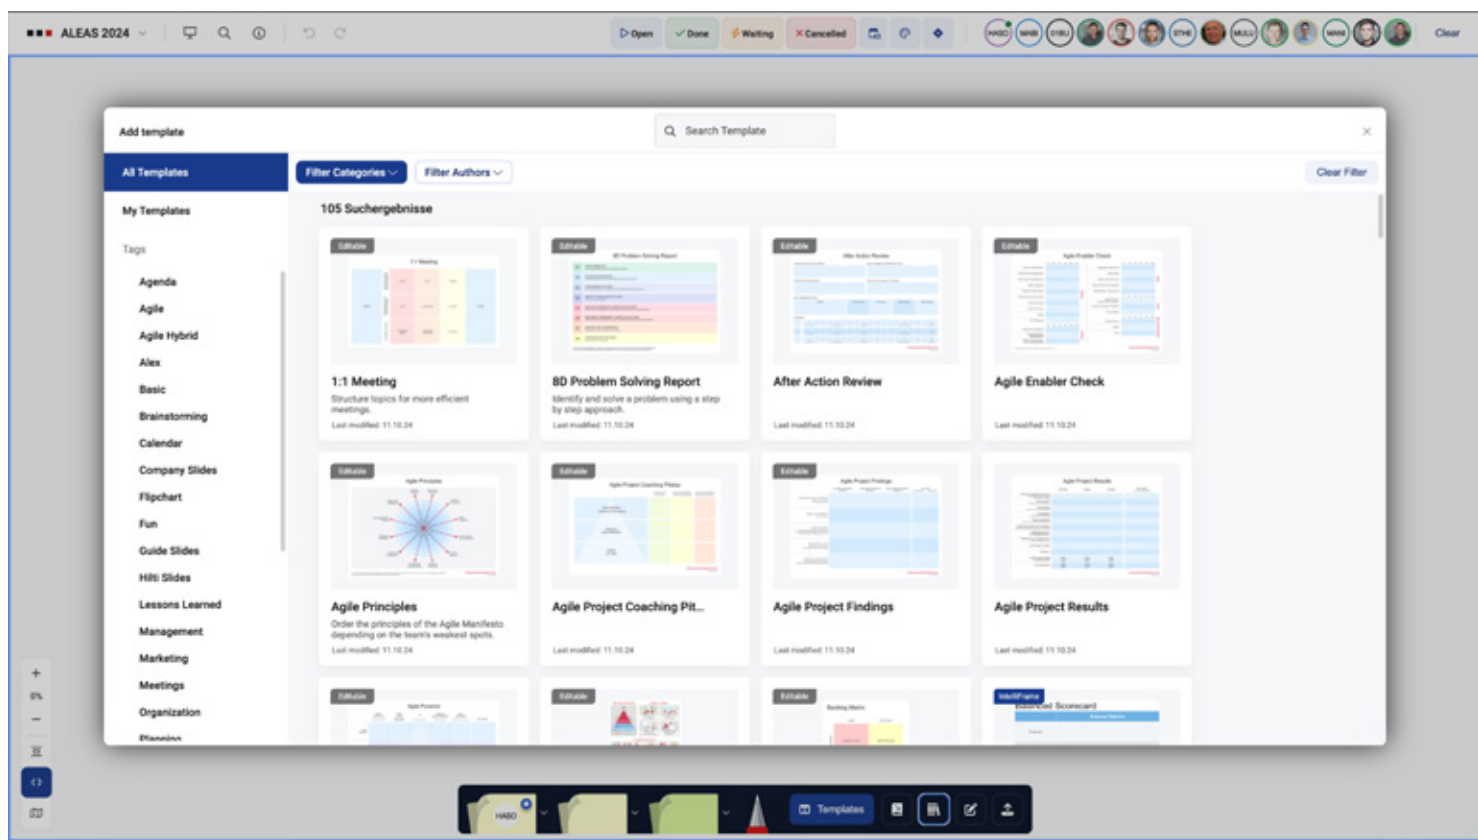

The Lens can be expanded into a full sidebar by clicking the button on top of the Lens. This gives you a larger view of the sticky including all additional information.

Connection Lines

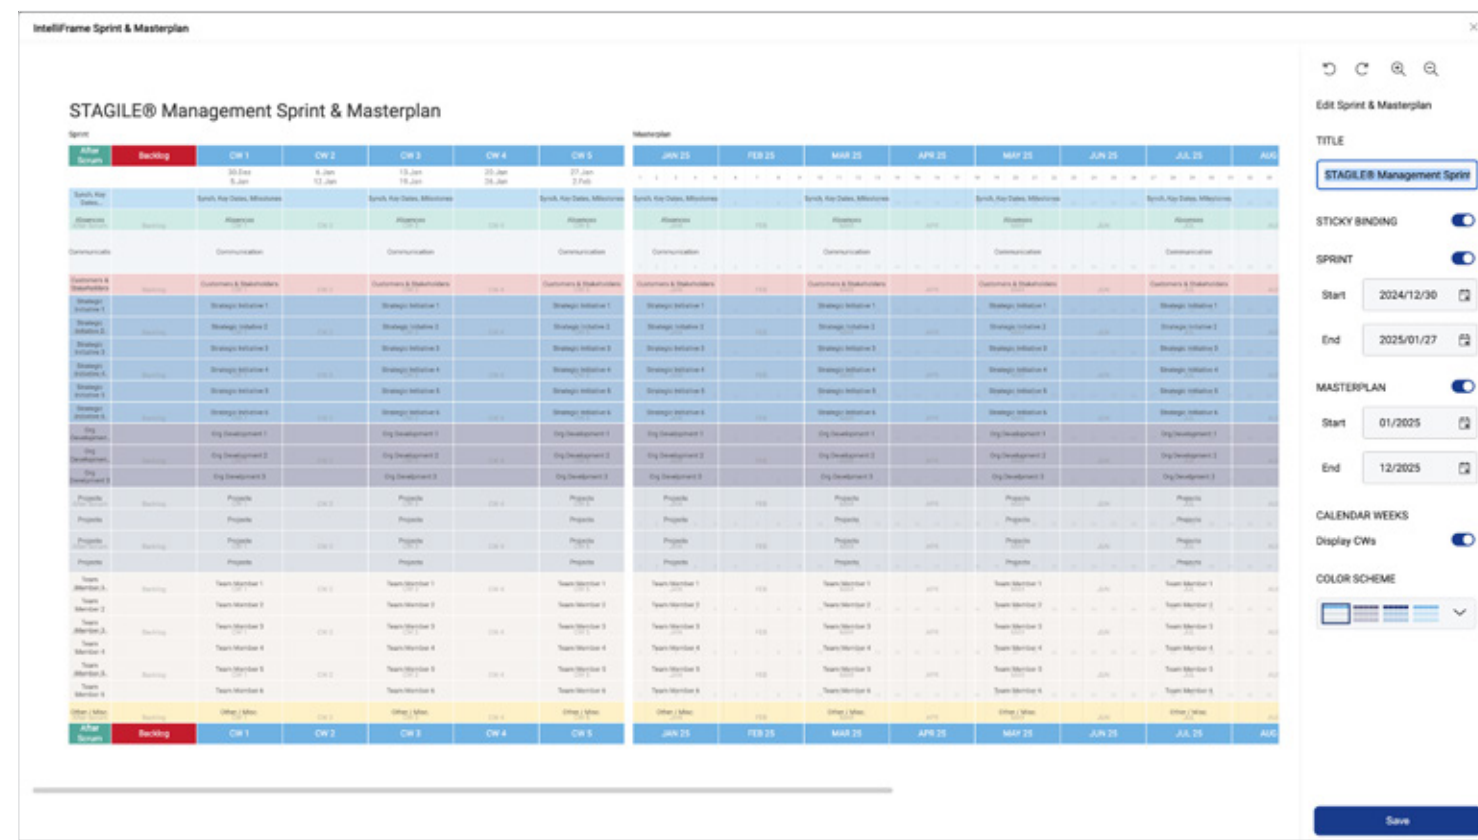

You can connect any sticky note to another on your board. Connection lines are particularly useful for building diagrams, displaying a critical path, or showing dependencies between deliverables.

Template Manager

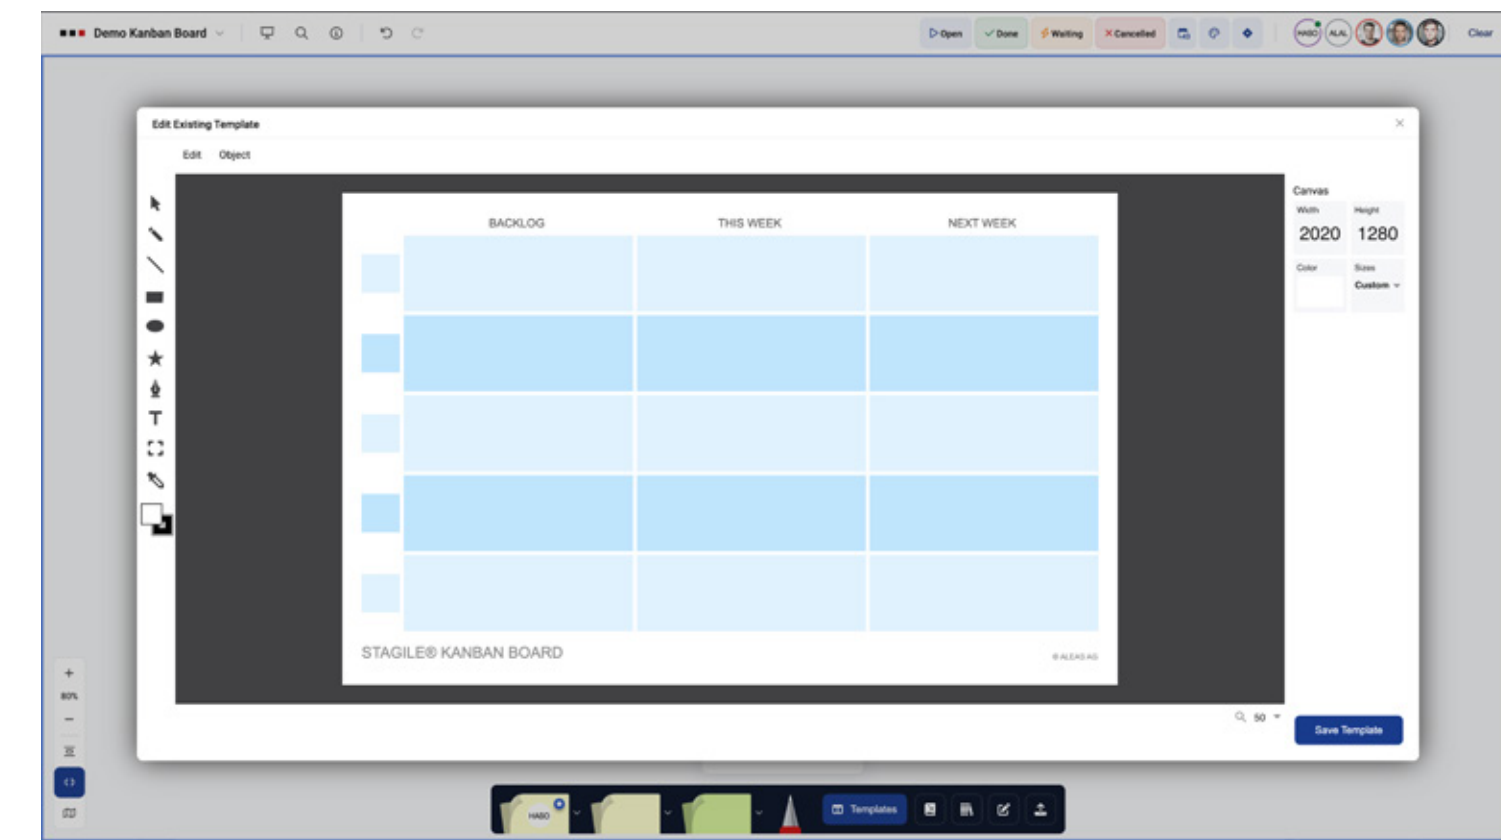

The Template Manager is a library for personal and company-wide templates, allowing you to easily manage and edit your templates directly in ALEAS Board. A variety of free templates is included.

IntelliFrames

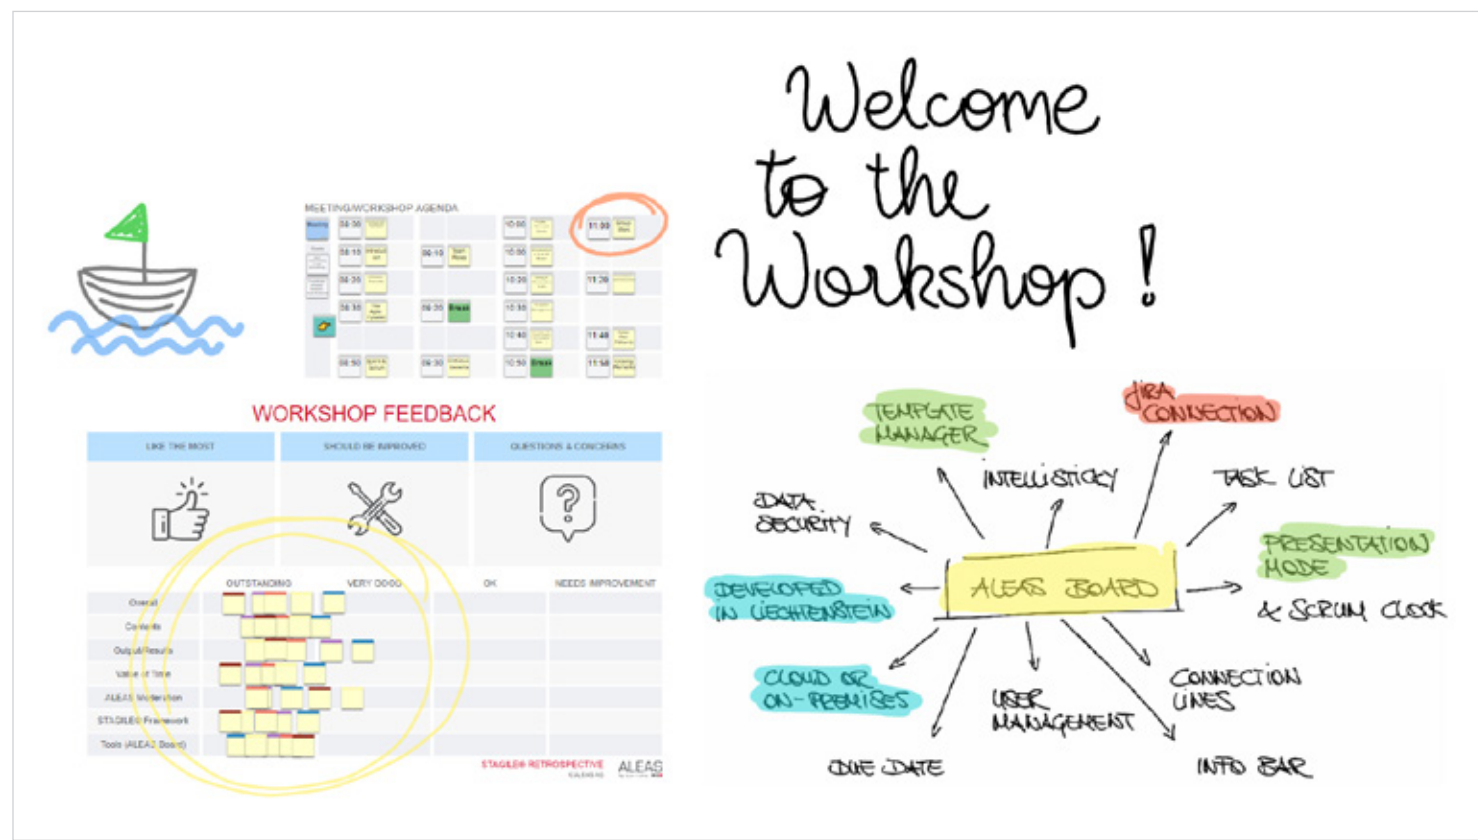

IntelliFrames are special templates, which are automatically generated based on different parameters, for example Agenda, Spreadsheet and Sprint & Masterplan. You can also embed websites, Excels and Power BI charts.

Template Editor

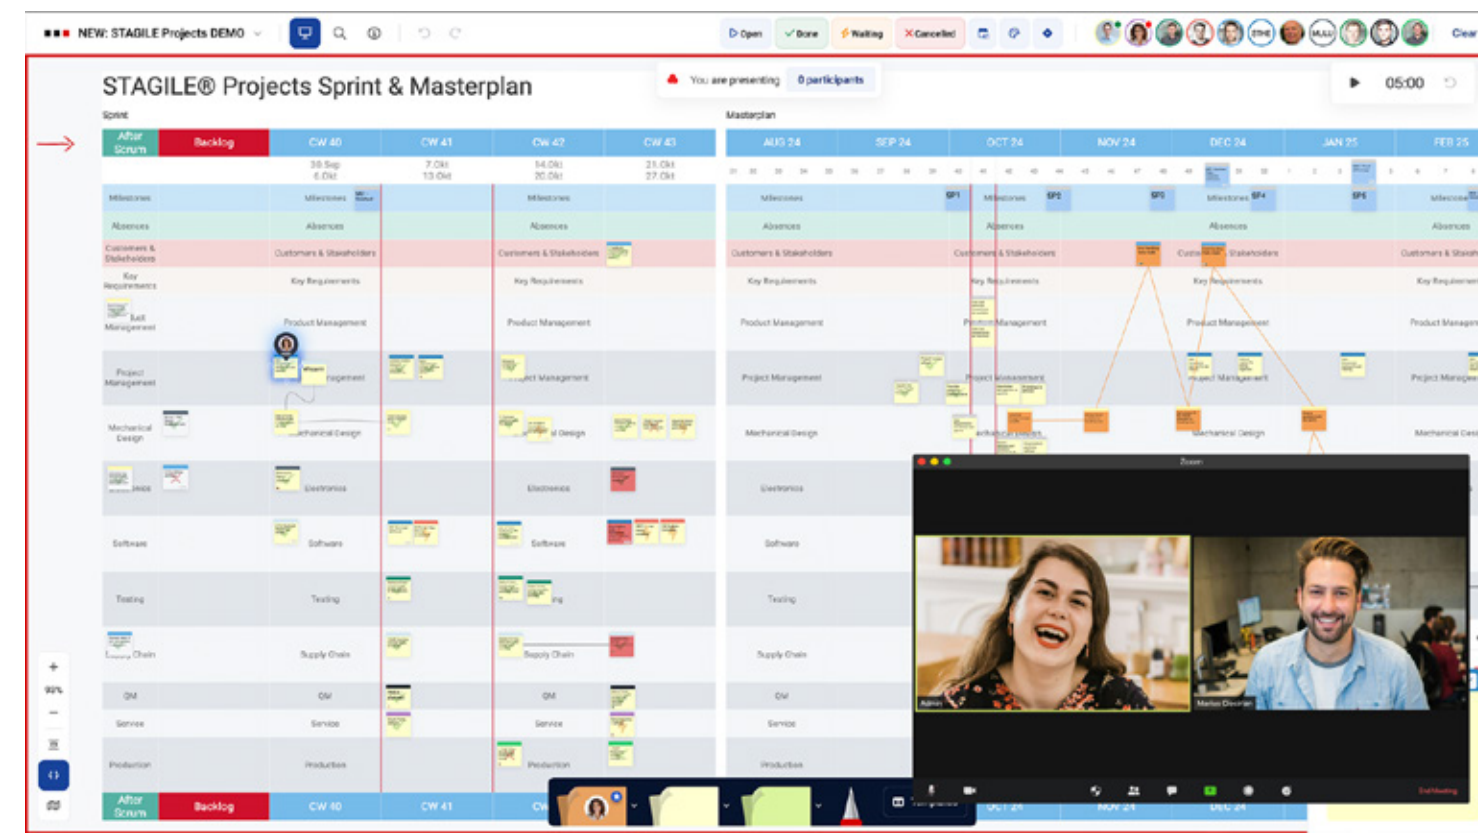

The integrated Template Editor allows you to create high-performance and high-resolution SVG templates from scratch or edit templates from the library without leaving the board.

Pen Tool

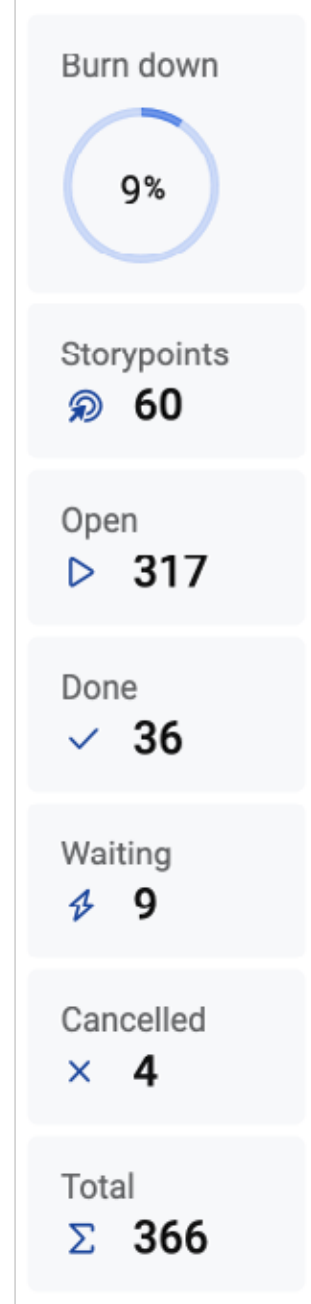

With the Pen Tool you can add written text and freehand drawings to the board, annotate boards and highlight important elements – which is especially useful for meetings or workshops.

Presentation Mode

The Presentation Mode is especially useful for distributed teams and will make your meetings simpler and more efficient. The integrated Scrum Clock allows you to track the time per speaker.

Info Bar

The Info Bar provides an overview of all stickies on the board. The information updates in real time based on the filters applied or the stickies you have selected.

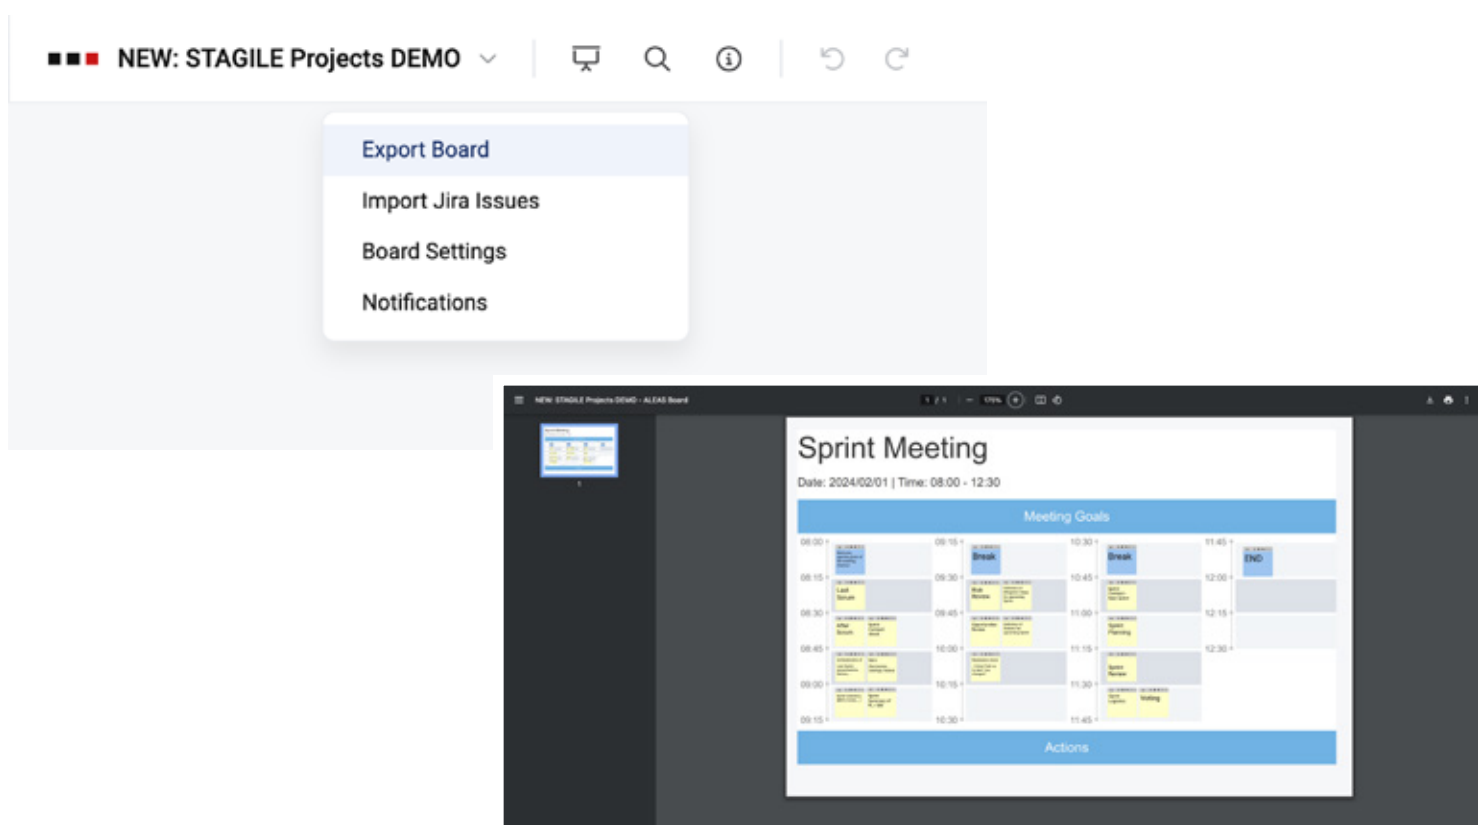

At the top of the Info Bar, you'll find the burn down ratio, which calculates the percentage of "done" stickies relative to the total number of stickies.

Bird View

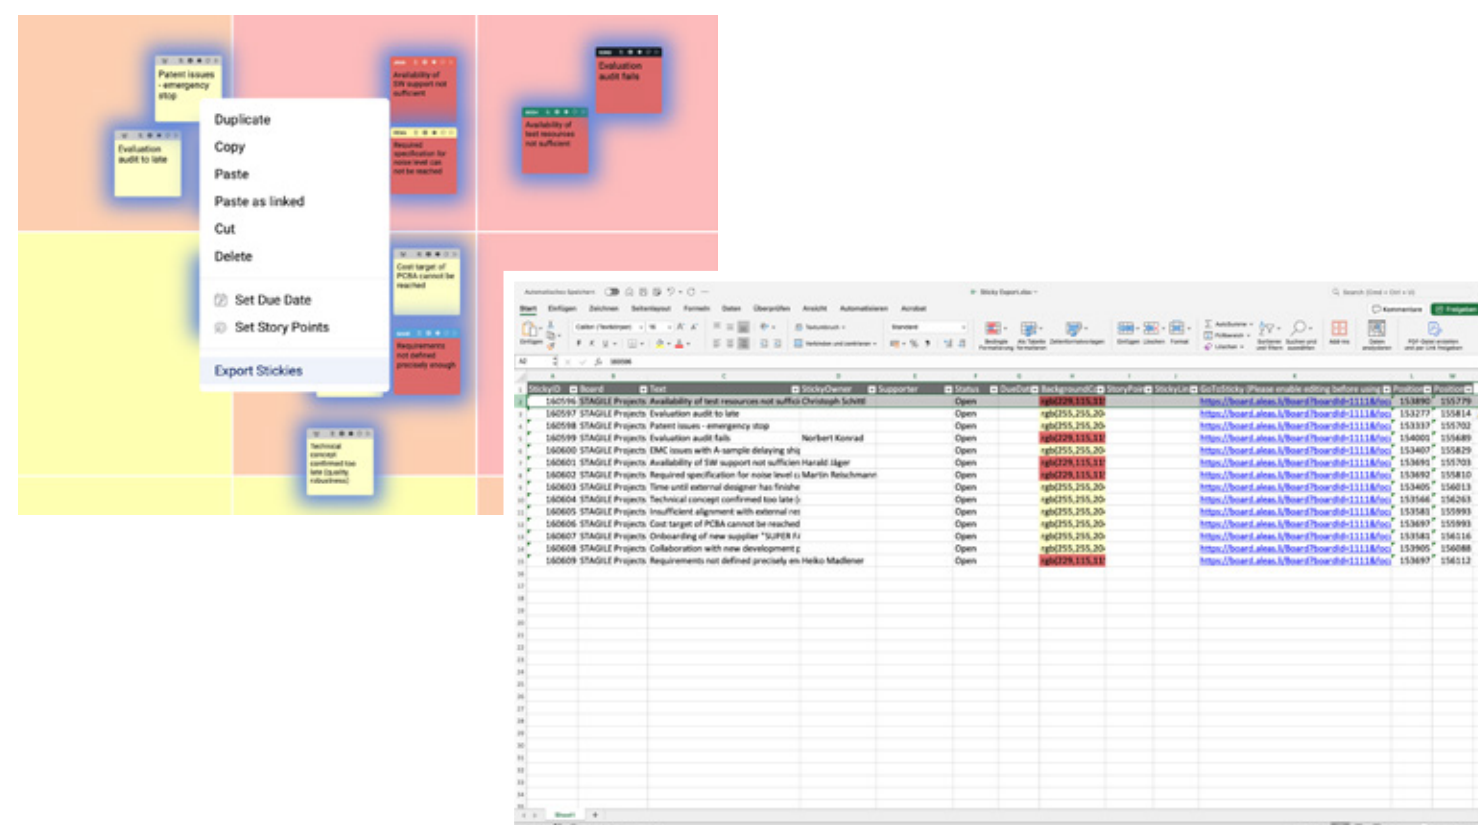

The Bird View (located at the bottom left corner of the board) shows you a complete overview of your board. You can save individual „frames“ (snapshots) for easy navigation. If you set one frame as your favorite it will be the default view whenever you open the board.

Pdf Export

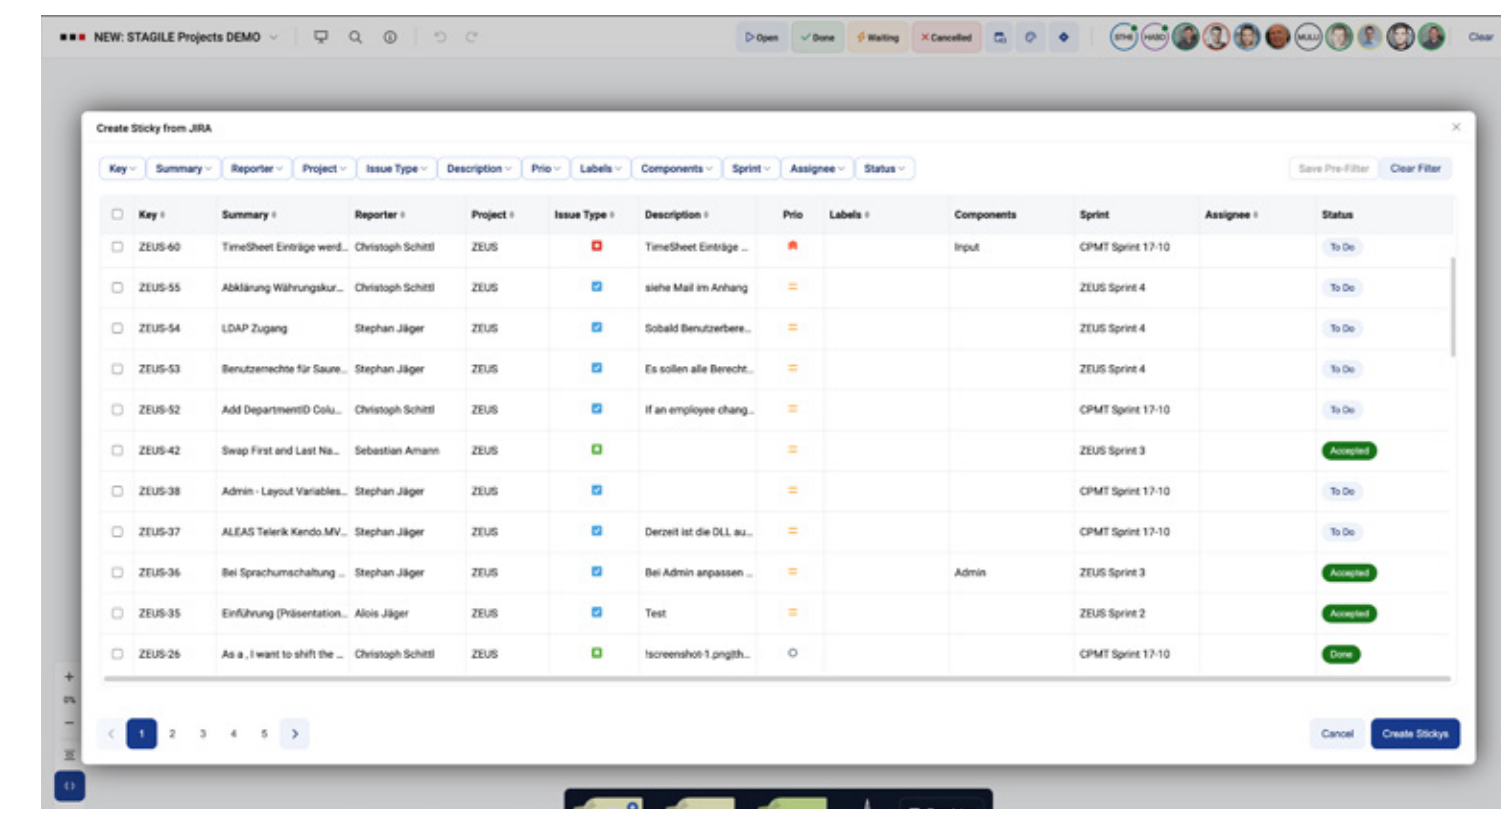

Export complete boards or board sections as a pdf file – which is especially useful when needing to share the board with someone external or to save a copy for backup or documentation.

Excel Export

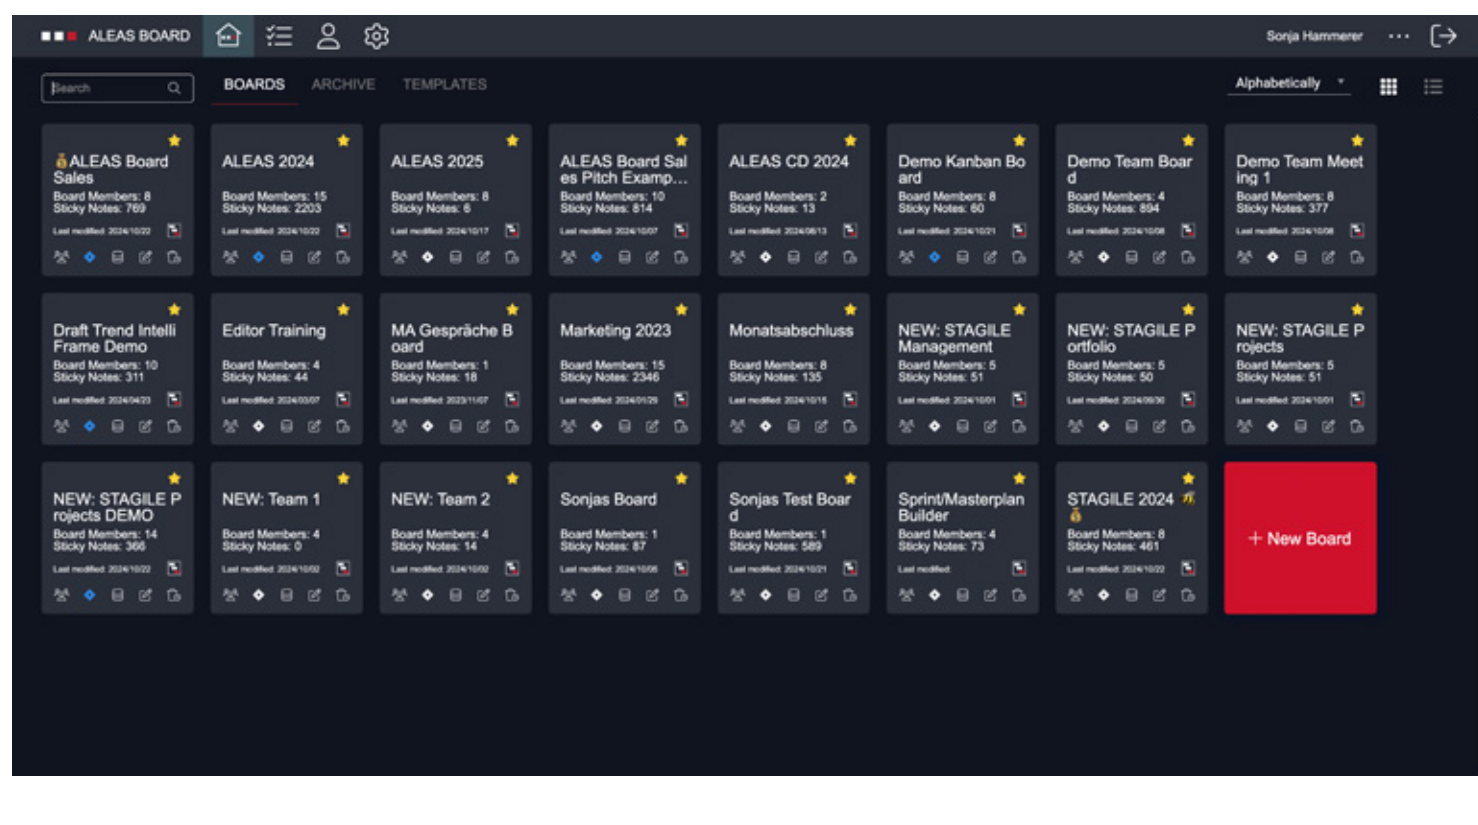

You can export any number of selected sticky notes as an Excel file. The automatically generated spreadsheet includes a lot of information, such as sticky owner, assignees, link, color and position on the board.

Jira Integration

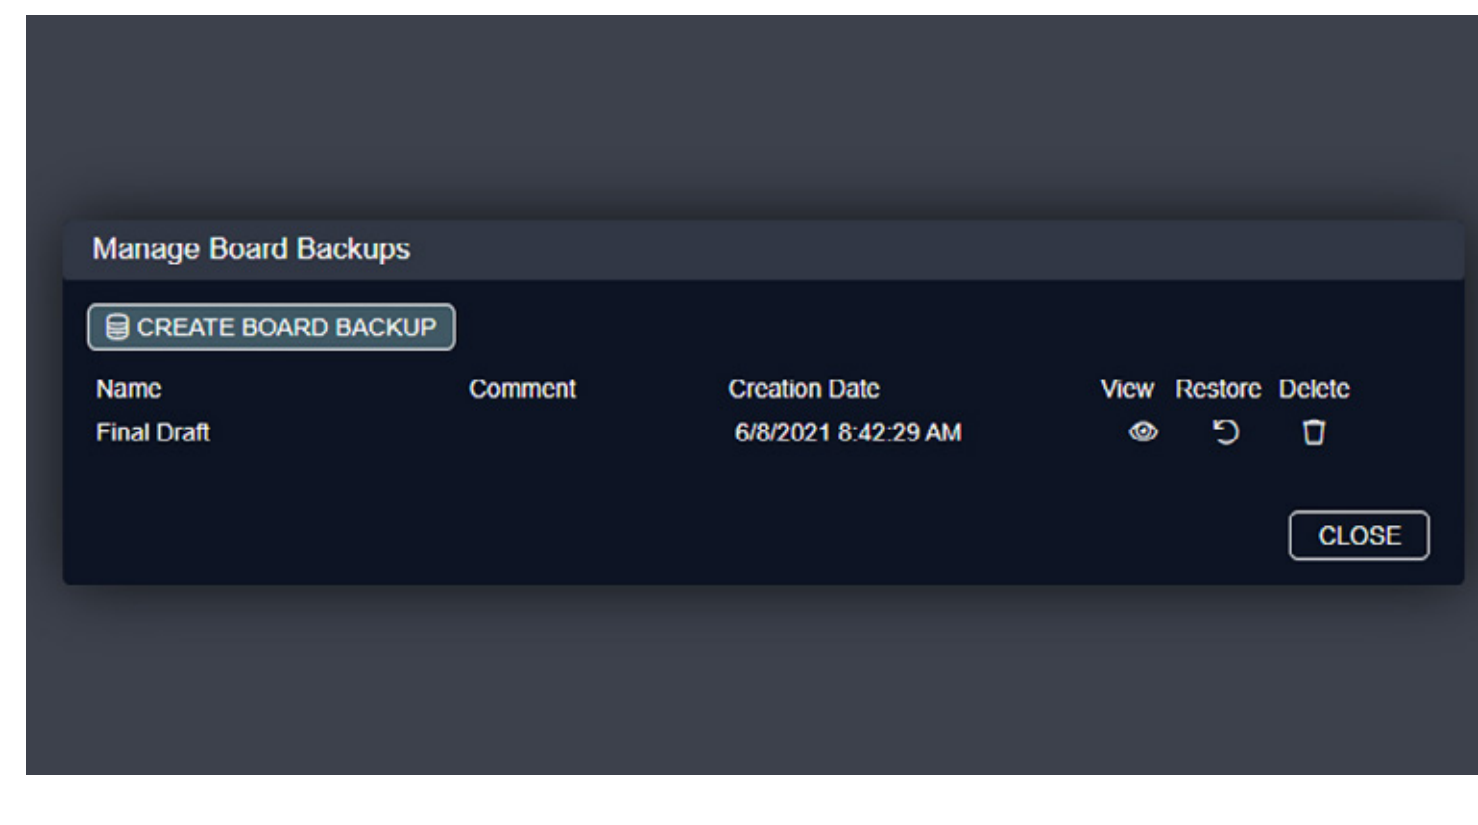

ALEAS Board can be fully integrated with Jira, including export and multi-import of IntelliSticks or Jira Issues, filter functions, full permissioning etc. The Jira synchronization can be activated by the board admin.

Dashboard

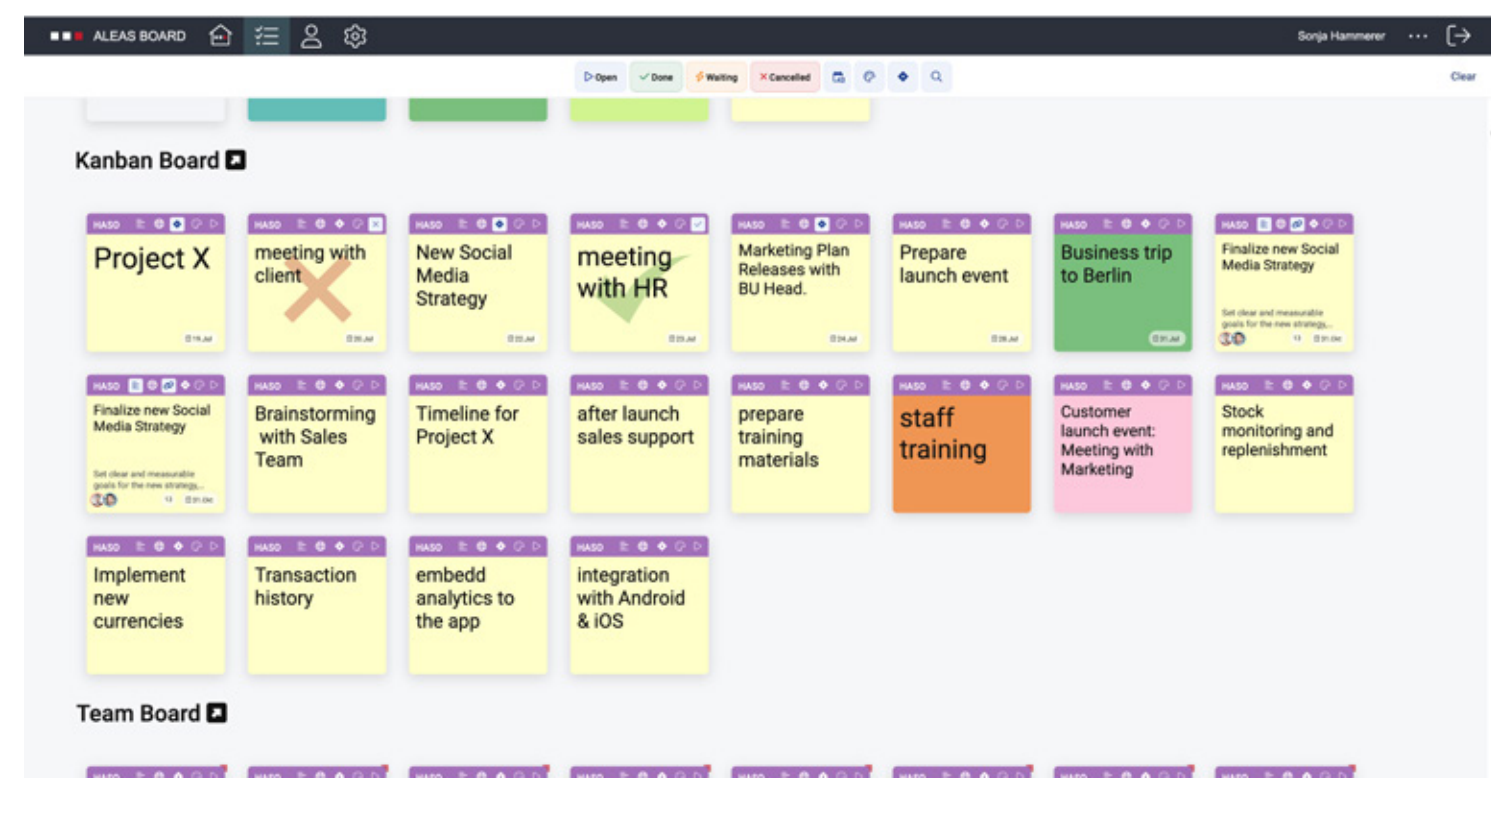

In the dashboard you can create new boards, rename, delete and archive boards, create backups, set board favorites and manage board members (some features are only available to board admins). You can switch between the classic tile view or the list view.

Board Backup

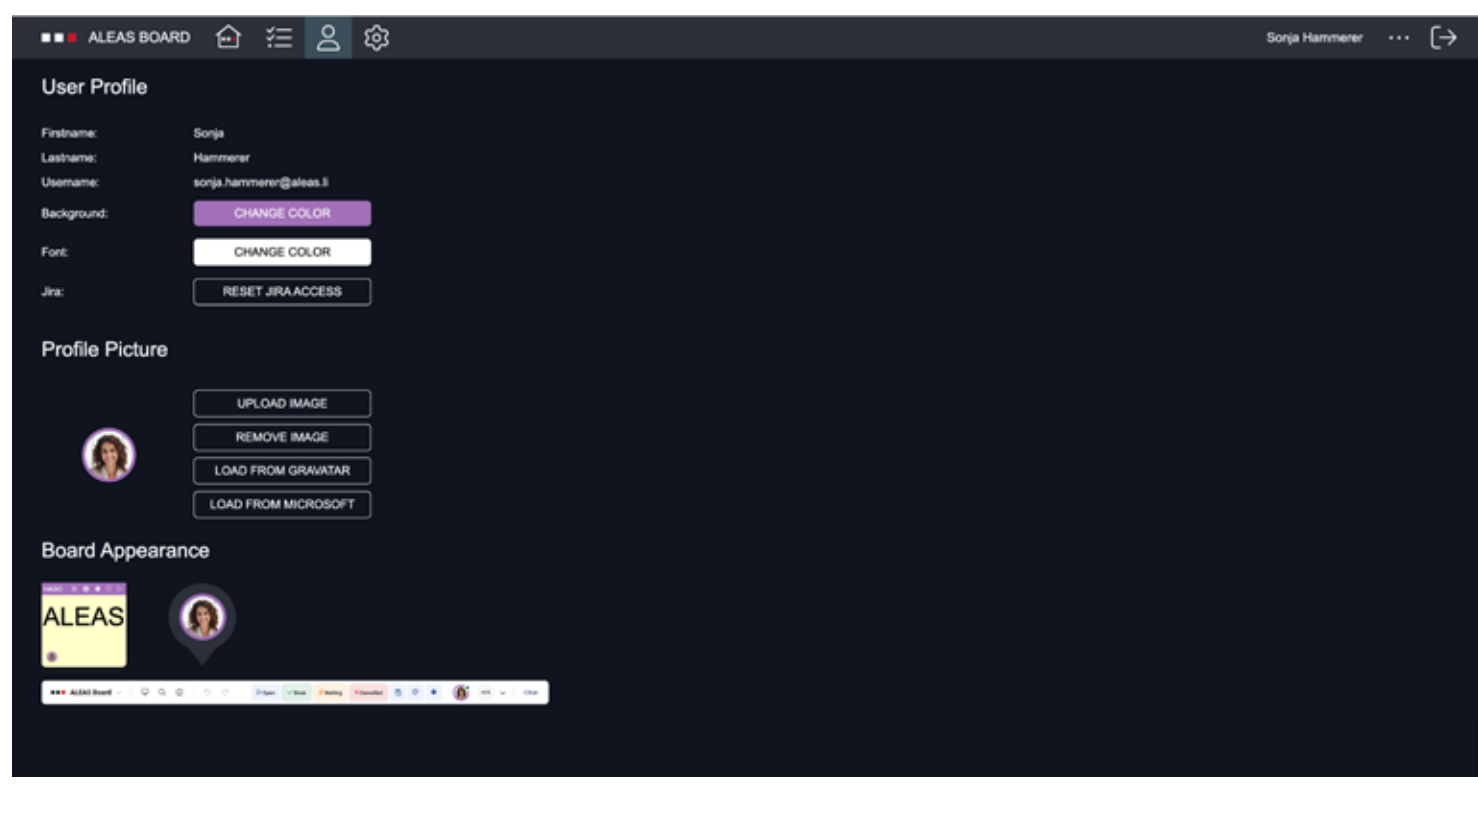

The Backup feature is ideal for documentation and version control. Board Admins can create new backups or restore backups to either the active or a new board. All board members can view the backups.

Task List

The Task List gives you a complete overview of all the stickies you are assigned to across all boards. The sticky notes are fully functional and can be edited. The Task List also includes a Filter Bar.

User Profile

In your User Profile settings you can select your preferred user background and font color and upload a profile picture. This will change the appearance of your sticky notes as well as your avatar.

Find out more

You can find more information about all tools and features (Help Center) as well as our tutorial videos for new users at aleasboard.com.
